Committee Report

We confirm that we, as the examining committee, have thoroughly reviewed the graduation project report. After careful examination of its content, we believe that it meets the necessary requirements to be considered a suitable project document for the completion of a B.Sc. in Information Systems.

Acknowledgements

We begin by expressing our gratitude to the Almighty for blessing us with success in our endeavors. We extend our heartfelt thanks to our esteemed Supervisor and the supportive staff of the Department of Information Systems. This is also an opportune moment for us to convey our profound appreciation and utmost respect to Dr. Majdy Mohammed Eltahir for his exemplary guidance, continuous monitoring, unwavering encouragement, and the invaluable assistance and counsel he provided throughout this journey.

Abstract

Tourism plays a crucial role in bolstering the economy of our nation. However, there are several challenges that tourists encounter when trying to access tourism programs and services in Makkah, Saudi Arabia. These challenges include difficulties in finding entertainment venues, hotels, and restaurants, as well as a lack of awareness about tours and political events taking place in Makkah. Additionally, tourists often struggle to book activities and accommodations within the city.

Our central objective for this project is to boost tourism in Makkah, Saudi Arabia, by developing a " Website for Tourist Guidance in Makkah." This comprehensive online platform is designed to effectively curate and showcase compelling content covering Makkah's diverse cityscape and the wide array of tourism offerings available. This content will span from historical landmarks to entertainment venues and medical facilities. Furthermore, the website will function as an invaluable resource for tourists planning a visit to Makkah. It will provide extensive information about tourist attractions, accommodation options, dining establishments, as well as real-time updates on tours and political events. Moreover, it will offer the convenience of booking these activities directly through the platform. Additionally, it will assist travelers in discovering suitable places to explore, stay, and dine, all while considering their budgetary preferences.

Chapter 1: Introduction

1.1 Introduction

Nowadays, there is a high potential to enhance the tourism sector in different types of tourism, such as historical places, entertainment places, and medical places. Tourism in countries plays a major role in developing the economy significantly. Moreover, good tourism in a country reflects a massive amount of job opportunities for the locals and attracts investors to invest in the country's projects like hotels, restaurants, and transportation [1].

Saudi Arabia is the second biggest tourist destination in the Middle East with over 16 million visiting in 2017 [2]. Although most tourism in Saudi Arabia still largely involves religious pilgrimages, there is growth in the leisure tourism sector. As the tourism sector has been largely boosted lately, the sector is expected to be the white oil for Saudi Arabia. This is proved as the tourism sector is expected to generate \$25 billion in 2019 [3]. Potential tourist areas include the Hijaz and Sarawat Mountains, Red Sea diving, and a number of ancient ruins.

In line with this, our project enhances the tourism experience in Makkah, Saudi Arabia, by offering an innovative, interactive content platform complemented by essential services such as guidance and event booking for visitors. This proposal advocates the development of a web-based solution aimed at elevating tourism in Makkah, Saudi Arabia, through an advanced internet service-driven content management system. This system aims to enhance the interactivity of information about various destinations and their available services, while also facilitating the booking of guides for visitors exploring the featured locations within the application.

1.2 Problem Statement

Unfortunately, in Makkah, Saudi Arabia, there are many historical places, entertainment venues, and medical facilities that remain unknown to visitors, despite their productivity and attractiveness. The lack of accessible information and engaging content about these places hinders travelers from exploring them fully. Additionally, the underutilization of electronic services for key features supporting the tourism sector, such as bookings, guides, and ticketing, exacerbates these challenges.

These difficulties harm the growth of tourism in Makkah, affecting both the local economy and job opportunities. With fewer visitors to tourist destinations, the revenue generated by restaurants, hotels, and commercial activities decreases, leading to a reduced number of job openings. However, our proposed application aims to address these challenges and contribute to the enhancement of the tourism sector in Makkah, Saudi Arabia.

1.3 Proposed System

The proposed solution involves the development of a web-based application designed to offer comprehensive information about tourist attractions, lodging choices, and dining establishments, along with live updates on tours and political events in Makkah, Saudi Arabia. Furthermore, the platform will streamline the booking process for these activities, enhancing convenience for users. Additionally, it will aid travelers in identifying appropriate destinations for exploration, accommodations, and dining, all while taking into account their budgetary constraints.

1.4 Aim of The Project

The main goal is to develop a system that automates the operations and activities of a travel agency and provides a suitable tourist program at the available budget to the tourists in Makkah, so we have to achieve these objectives to develop a helpful system and reach our goal.

1.5 Objectives of The System

The objectives are:

- To improve the increase of tourist site content on the internet based on the cities and tourist types in Makkah with better interactive content.
- To improve the promotion of hotels, restaurants, and events related to tourist sites in Makkah.
- To provide powerful marketing to the guides and the events that will be held in Makkah.
- To assist tourists in recommending places, hotels, and restaurants based on their budget in Makkah.

1.6 Methodology

This project follows a Waterfall methodology for structuring and organizing the processes and tasks that the team will undertake in software development. In the Waterfall model, the project progresses through distinct, sequential phases, with each phase building upon the deliverables of the previous one.

In software development, each project adheres to a Waterfall methodology for managing and organizing the development process. The Waterfall model emphasizes a linear and sequential approach, with well-defined stages such as understanding, gathering requirements, analyzing requirements, designing requirements, implementation, and testing. This structured approach allows for a systematic progression through each phase, ensuring that each stage is completed before moving on to the next. Changes to project requirements are generally not accommodated once a phase is completed, making it crucial to correctly identify and plan for requirements at the outset, as depicted in Figure 1.1.

Figure 1. 1: METHODOLOGY

The software development process typically adheres to the Waterfall model, which consists of distinct, sequential phases to ensure the successful creation and ongoing maintenance of an application. These phases are as follows:

1. Requirements Analysis:

- **Requirements Definition:** In this phase, the project team thoroughly defines and documents all project requirements, including who the end-users are, what data must be entered, how the application will be used, and what information it should provide to users.
- **Validation and Feasibility Assessment:** The gathered requirements are rigorously assessed for their validity and feasibility, ensuring that they can be effectively incorporated into the application.

2. System Design:

- **Architectural Design:** Based on the defined requirements, the project team creates a comprehensive architectural plan for the application.
- **Database and User Interface Design:** Database structures and user interfaces are meticulously planned and designed.
- **Modeling:** Diagrams and models are generated to visually represent the application's structure and functionality.

3. Implementation :

- **Development:** Developers proceed to write the actual code, implementing the methods and algorithms necessary to bring the application to life.

4. Testing:

- **Unit Testing:** Each component is tested individually to ensure they function correctly.
- **Integration Testing:** The different components are integrated and tested to guarantee they work together seamlessly.
- **System Testing:** The complete system is rigorously tested to ensure it aligns with the established requirements.

5. Deployment:

- **Release:** Upon successful testing and verification, the application is prepared for deployment and made available to users.
- **Bug Fixes:** Any identified bugs or issues are addressed and resolved before the final deployment.

6. Maintenance:

- **Ongoing Support:** Following deployment, a maintenance process is in place to provide continuous support, address user-reported issues, apply updates, and ensure the application's ongoing smooth operation.

In the Waterfall model, each phase must be completed before moving on to the next, and changes are generally not incorporated once a phase is finished. This structured approach ensures a thorough and well-documented development process.

1.7 Scope and Limitation

The main scope of this project is to provide a website designed to assist tourists in exploring Makkah. This website serves as a guide, helping visitors discover key tourist cities in Makkah, facilitating bookings for various tourist activities within the region, and suggesting suitable tourist destinations based on their budget while providing valuable information about these places.

There are some limitations to this project, such as:

1. The website exclusively provides information about tourist destinations and facilitates activity bookings within Makkah only.
2. The user must have an internet connection to use this web app.
3. The web application will only be available in English.

1.8 Plan

To develop this project, a schedule was established utilizing an online Gantt chart tool called Office Timeline. The timeline, as depicted in Figure 1.2 and Figure 1.3, was created to outline the key dates and milestones for the project's execution.

Figure 1. 2: Project Plan for Project 1

Figure 1. 3: Project Plan for All Project

Chapter 2: Review of Lierature

2.1 Introduction

This chapter investigates many solutions that have been feeding travel around different counties such as UAE, Kuwait, Qatar, Oman and other countries. These applications can be described and show different features and services. These applications aim to expand the knowledge domain about tourist sites in the countries.

2.2 Related Work

2.2.1 Visit Saudi

Visit Saudi is a website specialized in promoting tourism and it is provided by Saudi Tourism Authority. It offers services like showing attractions with a brief description, pictures, and videos and booking events. In addition, a trip planner is a feature included in the site, which is used to organize or plan tourists' schedules. An app is also has been made for phone iOS and android users [4].

Figure 2. 1: Visit Saudi Website

1. Advantages of the "Visit Saudi" Website

- Promoting Tourism: The website serves as a dedicated platform for promoting tourism in Saudi Arabia, showcasing the country's attractions, culture, and heritage to a global audience.
- Comprehensive Information: It provides detailed information about various tourist attractions, including descriptions, images, and videos. This helps travelers make informed decisions about their destinations.
- Event Booking: The ability to book events through the website simplifies the planning process for tourists. It allows visitors to secure their spots for various activities and experiences.
- Trip Planner: The inclusion of a trip planner feature assists tourists in organizing their schedules and creating customized itineraries. This ensures a well-structured and enjoyable travel experience.
- Mobile App: The availability of a mobile app for both iOS and Android users enhances accessibility. Travelers can access information, plan trips, and make bookings conveniently from their smartphones, even while on the go.

2. Disadvantages of the "Visit Saudi" Website

- It doesn't provide recommendations for places, hotels, and restaurants based on tourists' budgets.
- It doesn't provide events and activities calendars.
- It does not entail offering valuable information about the top tourist destinations, tours, and political events happening in Makkah.

2.2.2 Saudi Tourism Authority

This application aims to help support the growth of the travel and tourism sector in Saudi Arabia. the Ministry of Tourism, Saudi Tourism Authority, and Tourism Development Fund are promoting Saudi as a tourism destination locally and internationally, fostering an attractive investment environment, and making the tourism investment more fascinating to all lenders and investors, optimizing the influence on the sector [5]. The objectives of this application are to promote Saudi Arabia, to develop the tourism sector, and to define and deliver tourism experiences. The application also highlights the major upcoming events or

festivals in Saudi Arabia. Another interesting feature of the application is planning to manage trip agents with the Saudi Tourism Authority.

Figure 2. 2: Saudi Tourism Authority Website

Advantages of the " Saudi Tourism Authority" Website

- **Enhanced Tourism Experiences:** The application aims to develop and deliver tourism experiences, enriching the offerings available to tourists. This can lead to a more satisfying and memorable experience for travelers.
- **Event Promotion:** By highlighting major upcoming events and festivals in Saudi Arabia, the application can attract a larger audience to these events, contributing to increased tourism and revenue generation during special occasions.
- **Trip Planning:** The feature that allows trip agents to manage trips in collaboration with the Saudi Tourism Authority can streamline the planning process for tourists and agencies. This efficiency can lead to more organized and enjoyable trips.
- **Information Accessibility:** Through the application, tourists and travelers can access valuable information about Saudi Arabia's attractions, culture, and events, enhancing their overall experience.

1. Disadvantages of the " Saudi Tourism Authority" Website

- It doesn't provide a booking guide for activities and tours that take place in Makkah.
- It doesn't provide recommendations for places, hotels, and restaurants based on tourists' budgets.
- It doesn't provide events and activities calendars.
- It does not entail offering valuable information about the top tourist destinations, tours, and political events happening in Makkah.

2.2.3 Visit Dubai

This application allows the user to enjoy his visit to Dubai using best the features and resources. The application can help for providing information about tourist sites, business information, trade information, and study information. In addition to all this, the app includes many additional features such a as currency converter and maps that can be used without an internet connection. The application is available in six different languages. According to the massive number of travelers to Dubai, this application provides a booking system supported by emirates flights, luxury hotels, budget hotels, and apartments rental for travelers in Dubai. Finally, it also manages trip planning in addition to the information, and advisory services [6].

Figure 2. 3: Visit Dubai Website

1. Advantages of the " Visit Dubai " Website

- Comprehensive Information: The application offers a wealth of information about tourist sites, business details, trade-related information, and study opportunities in Dubai. This comprehensive resource helps users plan their trips effectively.
- Additional Features: The inclusion of features like a currency converter and offline maps enhances the usability of the app, making it a valuable tool for travelers even without an internet connection.
- Multilingual Support: Being available in six different languages ensures that a diverse range of users can access and utilize the application, catering to a global audience.
- Booking System: The application provides a booking system that covers Emirates flights, luxury hotels, budget accommodations, and apartment rentals in Dubai. This feature simplifies the travel planning process and offers options for a wide range of preferences and budgets.

2. Disadvantages of the " Visit Dubai" Website

- It doesn't provide a booking guide for activities and tours that take place in Makkah.
- It doesn't provide recommendations for places, hotels, and restaurants based on tourists' budgets.
- It doesn't provide events and activities calendars.
- It does not entail offering valuable information about the top tourist destinations, tours, and political events happening in Makkah.

2.2.4 Visit Qatar

This site offers a wide genre of entertainment activities and events. It provides a trip planner feature in a different format. For example, a traveler first chooses which type of tourism he/she is interested in, which season, and what days of vacation. Based on that, the website automatically generates a complete trip with its time and place directions. It is the most used website by tourists due to its several features and functions. It can help visitors to find the best price for their budget in many areas such as flights, accommodation, and restaurants. Furthermore, promotes these areas by viewing images, and videos, and verifying visitors rating [7].

Figure 2. 4: Visit Qatar Website

1. Advantages of the " Visit Qatar " Website

- Diverse Entertainment Options: The website offers a wide range of entertainment activities and events, catering to various interests and preferences, ensuring that visitors can find activities that suit their tastes.
- Efficient Trip Planning: The trip planner feature, which allows travelers to customize their trips based on their interests, season, and vacation duration,

streamlines the planning process. It provides tailored itineraries with time and location details, making travel planning more convenient.

- User-Friendly: The website's user-friendly interface and unique trip-planning approach make it highly accessible and usable for travelers of all backgrounds and preferences.
- Cost Savings: It helps visitors find the best prices for their budget in key areas such as flights, accommodation, and dining. This can lead to cost savings and a more affordable travel experience.
- Promotion of Areas: By showcasing images, videos, and visitor ratings of various areas and establishments, the website promotes tourism and encourages visitors to explore new places and experiences.

2. Disadvantages of the " Visit Qatar" Website

- It doesn't provide a booking guide for activities and tours that take place in Makkah.
- It doesn't provide events and activities calendars.
- It does not entail offering valuable information about the top tourist destinations, tours, and political events happening in Makkah.

2.2.5 Visit Abu Dhabi

This application offers the visitor to check the most recommended landmarks and events in town including ratings and reviews from visitors. Furthermore, emergency calls are provided by the website in case of emergency. It shows all protocols for entering the city including covid-19 rules [8].

Figure 2. 5: Visit Abu Dhabi Website

1. Advantages of the " Visit Abu Dhabi " Website

- Landmark and Event Recommendations: The app provides visitors with recommendations for the most recommended landmarks and events in Abu Dhabi. This helps tourists make informed decisions about their itinerary, ensuring they don't miss out on the city's top attractions.
- Ratings and Reviews: The inclusion of ratings and reviews from other visitors allows users to gauge the quality and popularity of landmarks and events. This feature assists in making choices based on the experiences of previous travelers.

- Emergency Calls: The app offers an emergency call feature, providing essential contact information in case of emergencies. This ensures the safety and well-being of visitors in unexpected situations.
- COVID-19 Protocols: By displaying the COVID-19 rules and protocols for entering the city, the application helps travelers stay informed about health and safety measures, ensuring compliance with local regulations.
- Real-Time Information: Information about landmarks and events is regularly updated, ensuring that users have access to the latest details and can plan their visit accordingly.

2. Disadvantages of the " Visit Abu Dhabi" Website

- It doesn't provide a booking guide for activities and tours that take place in Makkah.
- It doesn't provide recommendations for places, hotels, and restaurants based on tourists' budgets.
- It doesn't provide events and activities calendars.
- It does not entail offering valuable information about the top tourist destinations, tours, and political events happening in Makkah.

2.2.6 Existing Systems Comparisons

This section shows a comparison based on the similar functional requirements used in the applications, such as having services like booking guides, guide ratings, events, and other features. Table 2.1 illustrates the comparisons based on 4 features on 5 apps.

Table 2. 1: Existing Systems Comparisons

	The website provides recommendations for places, hotels, and restaurants based on tourists' budgets.	It provides a booking guide for activities and tours that take place in Makkah.	It provides events and activities calendars.	It the provision of valuable information regarding the top tourist destinations, tours, political events, and football events occurring in Makkah.

Chapter 3: System Analysis and Design

3.1 Introduction

In this chapter, we turn our focus to the critical phase of requirements gathering. During this stage, we delve into a variety of methods for effectively collecting and documenting project requirements. We identify and describe the key individuals and groups whose input and insights play a pivotal role in shaping the design and functionality of the system. Subsequently, we delineate both the functional and non-functional requirements, encompassing what the system is anticipated to accomplish and how it should perform. Our attention then shifts to the specific product prerequisites, which encompass software and hardware requirements and serve as the foundational basis for the system's development. Additionally, we explore essential design elements such as use case diagrams, sequence diagrams, class diagrams, and user interface designs.

3.2 User Requirements

- **Tourists:** These individuals are responsible for viewing and booking activities and events.
- **Tourism Companies:** These are the individuals responsible for overseeing the booking of activities and events.
- **Admin:** He is responsible for managing the system.

3.3 Functional and Non-Functional Requirements

3.3.1 Functional Requirements Description

Functional requirements constitute a fundamental component of software and system requirements engineering. They outline the precise functions, attributes, and abilities that a software application or system must have to fulfill the requirements of its users and stakeholders. These requirements offer an elaborate depiction of how the system should perform in different scenarios and interactions.

3.3.1.1 The Function Requirements For Tourists:

- The tourist must be able to register on the website.
- The tourist must be able to log in and log out of the website.

- The tourist must be able to view tourist places such as name, description, and location.
- The tourist must be able to book a tourist place.
- The tourist must be able to view activities and events.
- The tourist must be able to book activities and events.
- The tourist must be able to cancel bookings for activities and events.
- The tourist must be able to pay for the booking
- The tourist must be able to contact with admin

3.3.1.2 The Function Requirements For Tourist Companies:

- The tourist companies must be able to register on the website.
- The tourist companies must be able to log in and log out of the website.
- The tourist companies must be able to add, update, and delete activities and events.
- The tourist companies must be able to receive bookings
- The tourist companies must be able to accept or reject booking
- The tourist companies must be able to receive payment
- The tourist companies must be able to contact with admin

3.3.1.3 The Function Requirements For Admin:

- The admin must be able to log in and log out of the website.
- The admin must be able to view or delete events and activity
- The admin must be able to add, update, and delete tourist places
- The admin must be able to view or delete tourists
- The admin must be able to view or delete tourist companies.

3.3.2 Non-Functional Requirements

The provided functional requirements specify what actions and capabilities the system should have. Non-functional requirements, on the other hand, define the qualities, characteristics, and constraints that the system must adhere to.

Here are the non-functional requirements for our proposed system:

Performance:

- The system should respond to user actions within 2 seconds or less.
- It should be capable of handling a minimum of 500 concurrent users without degradation in performance.

Reliability:

- The system should have an uptime of at least 99.9%.
- It must have regular data backups to prevent data loss.

Security:

- User data, including personal information and payment details, should be stored securely and encrypted.
- The system should have a robust authentication mechanism to prevent unauthorized access.

Usability:

- The user interface should be intuitive and user-friendly.
- The system should be accessible to people with disabilities (compliance with WCAG standards).

Scalability:

- The system should be easily scalable to accommodate future growth and new features.

Availability:

- It should be available 24/7, with minimal scheduled downtime for maintenance.

Data Integrity:

- Data entered into the system should be accurately stored and retrieved.

Browser Compatibility:

- The system should work seamlessly on popular web browsers (e.g., Chrome, Firefox, Safari).

Mobile Responsiveness:

- The system's web interface should be responsive and functional on various mobile devices.

These non-functional requirements help ensure that the system not only performs its intended functions but also meets the necessary quality standards and constraints to satisfy the users' and stakeholders' expectations.

3.4 Software and Hardware Requirements

3.4.1 Software Requirements

Software tools used in our proposed system as depicted in Table 3.1

Table 3. 1: Software Requirements

Tool / Language	Reason for Using This Program
HTML	HTML: provides structure and semantic meaning to the content, ensuring proper interpretation and accessibility. The first version of HTML, HTML 1.0, was released in 1993[9].
CSS	CSS: allows developers to control the visual presentation and layout of web pages, resulting in consistent and appealing designs. CSS1 was introduced in 1996, and since then, CSS has evolved through different versions, with CSS3 being the latest major release[10].
JavaScript	JavaScript: adds interactivity and dynamic functionality to web pages, enhancing the user experience and enabling advanced features. It was initially introduced in 1995 and has undergone significant updates and enhancements over the years, with ECMAScript 6 (ES6) being a major version release[11].
PHP	PHP, which stands for Hypertext Preprocessor, is a widely used open-source scripting language that is particularly well-suited for web development. Created by Rasmus Lerdorf in 1994, PHP has evolved into a powerful and

	versatile programming language. Here are some key aspects and features of PHP [12].
Visual Studio Code	Visual Studio Code (VS Code): is an open-source source code editor developed by Microsoft. but it is an open-source project with contributions from a large community of developers worldwide. Visual Studio Code was initially released in April 2015. Since then, it has been continuously updated with new features, bug fixes, and performance improvements.VS Code is available for Windows, macOS, and Linux, making it a versatile choice for developers working on different operating systems[13].
MYSQL	MySQL: is an open-source database system, which means it is free to use and has a large community of developers contributing to its development and support. This makes it a cost-effective solution for small to large-scale applications.MySQL was originally developed by MySQL AB, a Swedish company founded by Michael Widenius, David Axmark, and Allan Larsson. In 2008[14].

3.4.2 Hardware Requirements

Table (3.2) shows the system's hardware requirements.

Table 3. 2: Hardware Requirements

Hardware	Specifications
Computer	Processor: Core i5 or higher. RAM: 8 GB. Hard Disk 256 GB
Third-party server	The web application will be tested on a local server before being hosted by a third-party server.

3.5 UML Diagrams

In this section, we will elucidate the use case, sequence, and class diagrams.

3.5.1 Use Case Diagram

A use case diagram is a visual representation, typically created using the Unified Modeling Language (UML), that illustrates how a system engages with external actors. These actors can include users, other systems, or entities. Use case diagrams are a widely used tool in software development and systems engineering, employed to encapsulate and explain a

system's functional requirements. They achieve this by visually outlining the different methods by which users or external entities can interact with the system. As shown in Figures 3.1 to 3.4.

3.5.1.1 Use Case Diagram for Tourist

Figure 3. 1:Use Case Diagram for Tourist

3.5.1.2 Use Case Diagram for Tourism Companies

Figure 3. 2: Use Case Diagram for Tourism Companies

3.5.1.3 Use Case Diagram for Admin

Figure 3. 3: Use Case Diagram for Admin

3.5.1.4 Use Case Diagram for System

Figure 3. 4: Use Case Diagram for System

3.5.2 Sequence Diagram

A sequence diagram is an interaction diagram within the Unified Modeling Language (UML), which serves to visually depict the sequence and flow of communication between different components or objects within a system. It offers a dynamic perspective, illustrating how various elements, including objects, classes, or components, collaborate and communicate to achieve specific tasks or processes.

3.5.2.1 Sequence Diagram for Tourist

Figure 3. 5: Sequence Diagram for Tourist

3.5.2.2 Sequence Diagram for Tourist Companies

Tourist companies

Figure 3. 6: Sequence Diagram for Tourist Companies

3.5.2.3 Sequence Diagram for Admin

Figure 3. 7: Sequence Diagram for Admin

3.5.3 Class Diagram

Figure 3. 8: CLASS DIAGRAM

3.6 User Interface Design

3.6.1 Register Interface

The screenshot displays the 'Register' interface of a website titled 'Website for Tourist Guidance'. The header includes navigation links: HOME, ABOUT, CONTACT, and LOGIN. The main content area features a vibrant background of blue light rays and colorful, abstract shapes. A central yellow box contains the registration form with the following fields: Username, Email, Phone, Password, and a dropdown menu for 'Select User Type'. A blue 'Register' button is positioned at the bottom of this box. The footer section is divided into four columns: '©All Rights Reserved.', 'Company' (with links for About Us, Login, and Contact Us), 'Our Facilities' (with links for Places, Events, Family, and Products), and 'Subscribe' (with a text input field and a 'Send' button). Social media icons for Twitter, Facebook, Instagram, and LinkedIn are also present in the footer.
